Education

MPSTME, NMIMS
B.Tech in Computer Science Engineering (Data Science) — CGPA: 3.83/4 *July 2023 – Present*

Internship Experience

Data Engineering Intern — PwC
May 2025 – August 2025

- Developed a multi-agent GenAI pipeline for intelligent document processing using Azure OpenAI and AutoGen.
- Developed 4 agents (OCR, JSON conversion, summarization, SQLite ingestion) to automate document processing, cutting manual effort by 70%.
- Benchmarked multiple OCR models (GPT-4o, PaddleOCR, EasyOCR, Pytesseract, etc.), improving text extraction accuracy by 25%.
- Automated data flow from unstructured images/PDFs to structured databases, reducing manual effort by 70%.

Project Management Intern — *Concept Simplified*
May 2024 – Sep 2024

- Led a team of 10 interns for MHT-CET counselling, guiding 600+ students.
- Created content on engineering topics for the YouTube channel, helping grow subscriber base to 50k.
- Managed website operations and updates.

Projects

Multimodal Document Intelligence — *Python (PyMuPDF, BLIP, LLaMA)*

- Built an end-to-end pipeline to extract and process visual and textual content from PDFs using PyMuPDF.
- Generated image captions using BLIP and interpreted content via a local LLaMA model (llama.cpp) for contextual understanding.
- Enabled image and text extraction and inference to support document intelligence tasks like summarization and classification.

Fraud Detection System — *Python (LangChain , scikit-learn, PySpark)*

- Designed and implemented a modular pipeline for detecting financial fraud from transaction datasets using LangGraph.
- Developed agents for data ingestion, EDA, model training (Decision Tree / Random Forest), prediction, and evaluation.
- Leveraged scikit-learn and PySpark MLlib to optimize for accuracy; PySpark pipeline reduced false negatives by 90%.
- Integrated visualization and probability-based thresholds to improve fraud interpretability and detection.

Ratio Analysis Report on FMCG Companies — *Power BI, Excel*

- Compared financial health of top FMCG companies using ratio analysis (liquidity, profitability, solvency) in Excel.
- Built interactive Power BI dashboards with slicers, KPIs, and visual summaries for stakeholders.
- Designed to aid investors in identifying performance trends and making comparative decisions.

Pharmacy Distribution using Route Optimization — *C++ (Prim's, Dijkstra's, SHA-256)*

- Designed a secure and efficient pharmaceutical supply chain model by integrating route optimization and simulating blockchain
- Used SHA-256 to hash medicine data for authenticity, Prim's for single-truck path planning, and Dijkstra's for multi-truck distribution.
- Ensured traceable medicine distribution while reducing transport cost and delivery delays across Indian cities.

Technical Skills

Languages: Python, SQL, R
Libraries: Langchain, Autogen, HuggingFace, sklearn, scipy, pyspark, keras, Open-cv2, mediapipe
Tools: Databricks, Apache Airflow, Github Actions

Certification

- Supervised Machine Learning: Regression and Classification – Stanford, Coursera
- Data cleaning with Python - Code Academy
- Data Analytics with Python - IIT Roorkee, NPTEL (Ongoing)
